The Use of the foregoing Table.

SEek the Places Name in the first Column, and towards the Right Hand, you have the bearing and distance of the said Place from *Edinburgh*, &c. according to the Title in the head of the Table.

The Use of the difference of time in the Table, is to find the time when an Eclipse, or other Aspect of the Planets shall happen in any of the foresaid Places, by adding or substracting the distance to, or from the time when they fall at *Edinburgh*, (according to the Title). *Example*. To find the Change of the Moon at *Irwing*; *April* the 5 day 1688.

In the firſt two columns you have
Point and in the third the houres and
nuts of the flowing of each of the place
the Left Column. Therefore to find
tide in any of the foreſaid places, ſeek
place in the laſt column & in the 3 col
you have the hour and minut of its fl
ing on the Change and full Moon da
which adde the hour and minut of
moons ſouthing (being found in this t
as the Tide at Lieth is found in the Al
nack) and the ſum is the true time
full ſea at the place inquired for. Exa
ple, to find the full ſea at Lieth or *Dun*
the 20d. of the Moons age I find the fl
ing in tay & *Lieth* firth in the Tide T
to be 2 h 15 m. which added the Mo

the full ſea at Dunde and Lieth to
